

The intelligent product configuration

04.2023

With our in-house product configurator, STAHL CraneSystems provides comprehensive and powerful planning software for crane and system construction. The configurator can be used online flexibly at any time and anywhere.

Click a CraneKit

The easy-to-use configurator makes it possible to conveniently select and coordinate the various components. A continuously updated database provides access to the STAHL CraneSystems entire product portfolio.

Chain hoists as well as wire rope hoists are available as reliable, robust and safe hoists of the highest quality. In addition to separate components and hoists, in single operation or safe tandem operation, complete crane systems and CraneKits can be put together to meet individual requirements. On request, the product portfolio can also be configured in an explosion-proof design according to ATEX or IECEx.

Functionality

Due to the dynamic design according to mechanical, electrical and normative aspects, we realise individual customer requests in real time. With the help of a detailed visualisation, you can directly assess what the system will look like. You obtain exact details regarding the technology and prices.

The facts

- Self-developed planning software
- Flexible, non-local online access
- Individual, application-specific coordination of components
- Dynamic design and configuration of technology and price according to current standards
- Customer inquiries are processed in real time
- 2D/3D drawings for viewing and downloading
- Extensive document output in the form of data sheets, overview drawings, crane girder manufacturing documents and crane girder statics
- Interface to powerful calculation programs for special solutions
- Explosion-proof versions
